## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_MCQ

Attempt : 1  
Total Mark : 15  
Marks Obtained : 15

#### **Section 1 : MCQ**

1. What will be the output of the following code?

```
public class Main {  
    public static void main(String[] args) {  
        int i = 10;  
        do {  
            System.out.print(i + " ");  
            i -= 3;  
        } while(i > 0);  
    }  
}
```

**Answer**

10 7 4 1

**Status :** Correct

**Marks :** 1/1

2. What will be the output of the following code?

```
class Loop {  
    public static void main(String[] args) {  
        for (int i = 1; i <= 3; i++) {  
            for (int j = 1; j <= 2; j++) {  
                System.out.print(i + " " + j + " ");  
            }  
        }  
    }  
}
```

**Answer**

11 12 21 22 31 32

**Status :** Correct

**Marks :** 1/1

3. What will be the output of the following Java code snippet?

```
public class Main {  
    public static void main(String[] args) {  
        int day = 4;  
        String result = "";  
        switch(day) {  
            case 1:  
                result = "Monday";  
                break;  
            case 2:  
                result = "Tuesday";  
                break;  
            case 3:  
                result = "Wednesday";  
                break;  
            default:  
                result = "Other Day";  
        }  
        System.out.println(result);  
    }  
}
```

**Answer**

Other Day

**Status : Correct**

**Marks : 1/1**

4. What will be the output of the following code?

```
class LoopTest {  
    public static void main(String[] args) {  
        int i = 1;  
        while (i > 0) {  
            System.out.print(i + " ");  
            i++;  
            if (i == 5) break;  
        }  
    }  
}
```

**Answer**

1 2 3 4

**Status : Correct**

**Marks : 1/1**

5. What will be the output of the following code?

```
public class Main {  
    public static void main(String[] args) {  
        int i = 1;  
        while(i < 10) {  
            i += 2;  
        }  
        System.out.println(i);  
    }  
}
```

**Answer**

11

**Status : Correct**

**Marks : 1/1**

6. What will be the output of the following code?

```
class ConditionTest {  
    public static void main(String[] args) {  
        int x = 10;  
        if (x > 5)  
            System.out.print("High");  
    }  
}
```

**Answer**

High

**Status : Correct**

**Marks : 1/1**

7. What will be the output of the following code?

```
public class Main {  
    public static void main(String[] args) {  
        int sum = 0;  
        for(int i = 1; i <= 5; i++) {  
            sum += i;  
        }  
        System.out.println(sum);  
    }  
}
```

**Answer**

15

**Status : Correct**

**Marks : 1/1**

8. What will be the output of the following code?

```
class LoopTest {  
    public static void main(String[] args) {  
        int i = 1;  
        do {  
            System.out.print(i + " ");  
        }
```

```
        i *= 2;
    } while (i <= 8);
}
}
```

**Answer**

1 2 4 8

**Status : Correct**

**Marks : 1/1**

9. What will be the output of the following code?

```
class ConditionTest {
    public static void main(String[] args) {
        int a = 7;
        if (a == 7)
            System.out.print("Match");
        else
            System.out.print("No Match");
    }
}
```

**Answer**

Match

**Status : Correct**

**Marks : 1/1**

10. What will be the output of the following code?

```
class Test {
    public static void main(String[] args) {
        int a = 4, b = 5;
        if ((a + b) % 2 == 0)
            System.out.print("Even");
        else
            System.out.print("Odd");
    }
}
```

**Answer**

Odd

**Status : Correct**

**Marks : 1/1**

11. What will be the output of the following code?

```
class Test {  
    public static void main(String[] args) {  
        int x = 5, y = 2;  
        if (x + y == 10)  
            System.out.print("Ten");  
        else if (x - y == 3)  
            System.out.print("Three");  
        else  
            System.out.print("None");  
    }  
}
```

**Answer**

Three

**Status : Correct**

**Marks : 1/1**

12. What will be the output of the following code?

```
public class Main {  
    public static void main(String[] args) {  
        for(int i = 1; i <= 20; i = i * 2) {  
            System.out.print(i + " ");  
        }  
    }  
}
```

**Answer**

1 2 4 8 16

**Status : Correct**

**Marks : 1/1**

13. What will be the output of the following code?

```
class Main {  
    public static void main(String[] args) {  
        for (int i = 5; i > 0; i--) {  
            System.out.print(i + " ");  
        }  
    }  
}
```

**Answer**

5 4 3 2 1

**Status : Correct**

**Marks : 1/1**

14. What will be the output of the following code?

```
class Test {  
    public static void main(String[] args) {  
        int num = 15;  
        if (num > 10)  
            if (num % 3 == 0)  
                System.out.print("Divisible");  
            else  
                System.out.print("Not Divisible");  
    }  
}
```

**Answer**

Divisible

**Status : Correct**

**Marks : 1/1**

15. What will be the output of the following Java code snippet?

```
public class Main {  
    public static void main(String[] args) {  
        int score = 75;  
        if(score >= 90) {
```

```
        System.out.println("Grade: A");
    } else if(score >= 80) {
        System.out.println("Grade: B");
    } else if(score >= 70) {
        System.out.println("Grade: C");
    } else {
        System.out.println("Grade: D");
    }
}
```

**Answer**

Grade: C

**Status :** Correct

**Marks :** 1/1

## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Arun is working on a project to automate the process of determining whether a student has passed or failed based on their subject marks.

He aims to create a simple program that takes positive integers as marks for five subjects from the user. If the average of the marks is greater than or equal to 50, the student has passed the exam. Otherwise, the student has failed.

Help Arun to implement the project.

##### ***Input Format***

The input consists of five space-separated integers, representing the marks in five subjects.

### ***Output Format***

The first line of output prints "Average score: " followed by an integer representing the average score.

The second line prints one of the following:

1. If the condition is satisfied, print "The student has passed".
2. Otherwise, the output prints "The student has failed".

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 50 60 70 80 90

Output: Average score: 70

The student has passed

### ***Answer***

```
import java.util.Scanner;
class Main{
    public static void main(String []args){
        Scanner sc=new Scanner(System.in);
        int m1=sc.nextInt();
        int m2=sc.nextInt();
        int m3=sc.nextInt();
        int m4=sc.nextInt();
        int m5=sc.nextInt();
        int avg=(m1+m2+m3+m4+m5)/5;
        System.out.println("Average score:"+avg);
        if(avg>=50){
            System.out.println("The student has passed");
        }
        else{
            System.out.println("The student has failed");
        }
    }
}
```

**Status : Correct**

**Marks : 10/10**

## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 2\_Q2

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

Samantha is a diligent math student who is exploring the world of programming. She is learning Java and has recently studied conditional statements. One day, her teacher gives her an interesting problem to solve, which takes a number as input and checks whether it is a multiple of 5 or 7.

Help her complete the task.

##### *Input Format*

The input consists of a single integer N, representing the number to be checked.

##### *Output Format*

If the number is a multiple of 5 but not 7, the output prints "N is a multiple of 5".

If the number is a multiple of 7, the output prints "N is a multiple of 7".

Otherwise the output prints "N is neither multiple of 5 nor 7" where N is an entered integer.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 10

Output: 10 is a multiple of 5

### **Answer**

```
import java.util.Scanner;
class mani{
    public static void main(String[] args){
        Scanner sc= new Scanner(System.in);
        int a=sc.nextInt();
        if(a%5==0 && a%7!=0){
            System.out.println(a+" is a multiple of 5");
        }
        else if(a%7==0){
            System.out.println(a+" is a multiple of 7");
        }
        else{
            System.out.println(a+" is neither multiple of 5 nor 7");
        }
    }
}
```

### 2028\_REC\_OOPS using Java\_Week 2\_Q4

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

Amit wants to evaluate the depreciation of his car over time to understand its current value and categorize it based on that value.

Write a program that helps him determine the current value of his car after a certain number of years of depreciation and classify it into one of three categories:

High: If the current value is greater than 10,000.  
Medium: If the current value is between 5,000 and 10,000, both inclusive.  
Low: If the current value is less than 5,000.

The depreciation rate of the car is 15% per year. The program should calculate the current value of the car after applying this depreciation over the given number of years and print the current value along with the category.

### ***Input Format***

The first line of input consists of an integer, representing the initial cost of the car.

The second line consists of an integer, representing the number of years the car has been depreciating.

### ***Output Format***

The first line of output prints a double value, representing the current value of the car, rounded off to two decimal places "Current Value: <value>".

The second line prints its category "Category: <categories>".

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 20000

5

Output: Current Value: 8874.11

Category: Medium

### ***Answer***

```
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner sc =new Scanner(System.in);
        int ic=sc.nextInt();
        int y=sc.nextInt();
        double cv=ic;
        double dp=0.15;
        for(int i=1;i<=y;i++){
            cv=cv*(1-dp);
        }
        System.out.printf("Current Value: %.2f\n",cv);
        if(cv>10000){
            System.out.println("Category: High");
        }
        else if(cv>=5000 && cv<=10000){
```

```
        System.out.println("Category: Medium"); }  
    else  
    {  
        System.out.println("Category: Low");  
    }  
}  
}
```

##### **1. Problem Statement**

Maya, a student in an arts and crafts class, wants to create a pattern using stars (\*) in a specific format. She plans to use a program to help her construct the pattern.

Write a program that takes an integer as input and constructs the following pattern using nested for loops.

Input: 5

Output:

\*

\*\*

```
***  
****  
*****  
****  
***  
**  
*
```

### ***Input Format***

The input consists of a number (integer) representing the number of rows.

### ***Output Format***

The output displays the required pattern.

Refer to the sample output for the formatting specifications.

### ***Sample Test Case***

Input: 5

Output: \*

```
**  
***  
****  
*****  
***  
**  
*
```

### ***Answer***

```
import java.util.Scanner;  
public class Main{  
    public static void main(String []args){  
        Scanner ob=new Scanner(System.in);  
        int n=ob.nextInt();
```

```
for(int i=1;i<=n;i++){
    for (int j=1;j<=i;j++){
        System.out.print("* ");
    }
    System.out.print("\n");
}
for(int i=n-1;i>=1;i--){
    for(int j=1;j<=i;j++){
        System.out.print("* ");
    }System.out.print("\n");
}
}

### 2028\_REC\_OOPS using Java\_Week 2\_Q7

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

You are taking part in a coding challenge where your task is to design a program that conjures a mesmerizing numerical pyramid pattern. The enchanting pattern is fashioned using a for loop and is customized based on user input.

Participants are prompted to unveil the pyramid's magic by specifying its height - essentially dictating the number of rows in this spellbinding creation.

Write a program that employs to weave this captivating numerical pyramid as shown below.

Example

Input:

4

Output:

### ***Input Format***

The input consists of a positive integer n representing the number of rows in the pattern.

### ***Output Format***

The output prints the required pyramid pattern, as shown in the sample output.

Refer to the sample output for the formatting specifications.

### ***Sample Test Case***

Input: 4

Output: 1

123

12345

1234567

### ***Answer***

```
import java.util.Scanner;
class Main{
    public static void main(String []args){
        Scanner ob=new Scanner(System.in);
        int n=ob.nextInt();
        for (int i=1;i<=n;i++)
        {
            for (int j=i;j<n;j++)
            {
                System.out.print(" ");
            }
            for(int j=1;j<=(2*i-1);j++)
            {
                System.out.print(j);
            }
        }
    }
}
```

```
        }  
        System.out.println();  
    }  
}
```

### 2028\_REC\_OOPS using Java\_Week 2\_Q8

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### **Section 1 : Coding**

##### **1. Problem Statement**

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

##### ***Input Format***

The first line contains an integer N representing the number of valid codes to generate.

##### ***Output Format***

The output prints N lines, each line contains a valid 3-digit code.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 5

Output: 102

105

108

120

123

### **Answer**

```
import java.util.Scanner;
class SecureCodeGenerator {
